At Stud Locations:

Position the PortaJack-Pro floor tightening jack in line with wall studs. Operate lever handle to ratchet faceplate into contact with the wall stud. Continue to ratchet until flooring draws up to desired position. PortaJack-Pro can be left in place while you nail down the flooring strip.

Between Stud Locations:

Option 1 – Place a length of 2x4 or similar support board in front of the ram of the PortaJack-Pro and attach it using wood screws through the two holes provided. Then place PortaJack-Pro in position between the wall studs for support and ratchet until contact is made. To release the PortaJack-Pro, simply push the handle to full forward position releasing the pawls contact.

Option 2 – Place one or two flooring strips between the wall studs for support. Then place PortaJack-Pro in position and ratchet until contact is made with the support strips. To release the PortaJack-Pro, simply push the handle to full forward position releasing the pawls contact.
